## Method Innovation

- **Data Visuals, Culturally Responsive Approaches to Explainable AI**  
Culturally responsive visuals printed on laminated cardstock to provide people living in rural Togo with an understanding of the data collected in mobile phone metadata, and an intuition for how that data could be used in machine learning models to predict characteristics like poverty. Developed in Togo, the visuals have been adapted and used by GiveDirectly in urban Malawi. For more: see Kahn et al. 2025.
- **Data Privacy Scenarios**  
Building on scenario-based design, data privacy scenarios were developed in rural Togo to enable people to weigh-in on data privacy concerns raised by domain experts. For more: see Kahn et al. 2025.
- **Social Impact Scenarios: Bridging Technologists, Policymakers, and Local Communities**  
Building on scenario-based design, social impact scenarios leverage empirical data in concise narrative vignettes to offer technologists and policymakers concrete examples of how new technologies or tech policies may affect individuals and communities. These scenarios help guide decision-making toward more informed, context-sensitive interventions.
